compost.

The wet waste-food or the organic part forms more than 1/4 of our waste. It deteriorates naturally and can be completly recycled. Compost can be obtained from its fermentation, soil that can be used as fertilizer in agriculture and gardening. Humid waste needs to be separated with cure from any other type of waste that would make it all unusable.

- kitchen waste
- food left over's
- egg shelves'
- coffee grinds
- pet waste
- bread, fruit, fish shelves
- paper towels and tissues
- fireplace ashes

gray bag
monday, wednesday, friday
from**20**.00 to**24**.00
the day before the collection

3

paper and cardboards.

Paper and cardboards form a third of our waste. If recycled, cutting down of many hectares of forest can be avoided, the increment of trash in the sites and the import of pulp paper.
Only clean paper and cardboards are collected.

- newspaper and magazines
- book and notebooks
- photocopies and paper
  (remove plastic and matal parts)
- small boxes
- all other items made of paper

white bag
wednesday
from**20**.00 to**24**.00
the day before the collectio

4

non ricyclable.

The waste that is not able to be separated with the recycling program needs further treatment. They are destined in part to the installation of production of CDR for the energy recuperation or in the disposal site.

- diapers
- dirty plastic cutlery, plastic dishes
- pens, cassettes, CD's
- rubber
- oily/plastic paper
- paper and cartboards very dirty
- shoes, light bulbs
- dust from vacuum cleaners
- toys

black bag
tuesday, thursday, saturday
from**20**.00 to**24**.00
the day before the collection

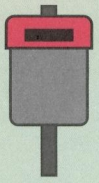
other waste.

Urban dangerous waste
Discharged batteries and expired medicines are very dangerous waste. They need to be discharged in the specially provided container located near the pharmacies and the dealers

- Expired medicines
- Discharged batteries



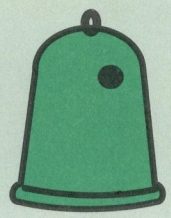
Bulky material
To help the citizens to discherge big items or more likely anything that will not fit in a bag, the town hall offers a free door to door service.

- Furniture
- Tires
- Bicycles
- Mattresses

Call
0823 84 80 76
Call this number for the free door to door pick-up service.

Glass
Please carefully remove all metal parts and do not dispose in the same glass bell ceramic objects or any other item that is not glass.

- Glass bottles
- Glass vases
- All glass object



recycled materials: the vantages for the environment.

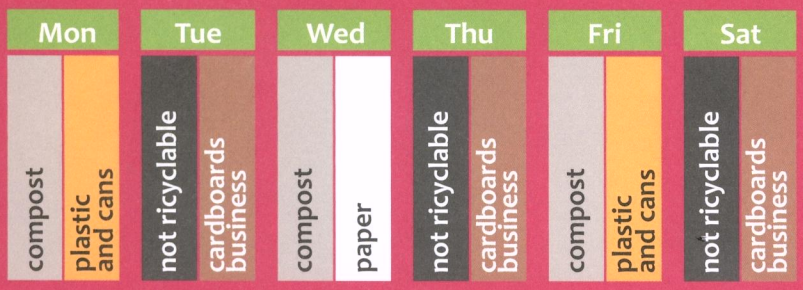
To accumulate trash haphazardly means damage our environment and not to take advantage of the enormous source of wealth that they contain. To recycle paper, glass, plastic, organic waste and therefore recoup them under various forms (prime materials, energy, fertilize) means to reduce the quantity of waste to be disposed and contain the environment pollution.

It is not possible to produce, consume and then dispose, but it is necessary to adapte cycles that foresee the production, the consumption and the re-production, in other words we need to reconvert in useful material what has become trash. The so-called responsible cycle.

For the plastic, the recycle is the way to save the most natural resourses and it reduces drastically the quantity of trash to discharge in the sites. Treating the recycled waste in the two installations SRI and Erreplast it starts the virtuous cycle. The SRI installation improves the selection of materials that derive from the differentiated collection making them adeguate for the following manufacturing process. The Erreplast installation transforms the PET of the bottles in Ripet, prime material used for the realization of many products.

The bottle bacome a smooth pullover, a warm blanket, a new container.

Calendar of the collection



All those that violate these dispositions will be penalized by Law.

BACK

program

ER le visite guidate re-plast

Erreplast and SRI, firms in the Campania Region leader in the recoup, treatment and transformation of the waste post-consumption, fully conscious of one's roll in the chain of the trash in the Campania Region, supporting valid initiatives towards the recoup of materials from urban waste.
Already manifested with the ER program of guided visits of the implants, the intent is to spread the culture of the recycling of materials, to sensitize and make more awareness of the commitment for the environemental protection.
