An important Public Health Evaluation has been completed under the guidance of the Navy and Marine Corps Public Health Center. The Public Health Evaluation was designed to evaluate the potential short and long-term health risks associated with living in the Naples area as a result of inadequate trash collection, uncontrolled open burning of uncollected trash, and widespread dumping of waste, including chemical and other hazardous waste.

Launched in 2008 and completed in June 2011, the Public Health Evaluation involved the collection of air, water, soil and soil gas samples from throughout the region to identify whether there are potential health risks.

About: Chemicals and Microorganisms Analyzed

Chemicals and microorganisms analyzed in the Phase I and Phase II Public Health Evaluation

Fifteen categories of chemicals/microorganisms were tested and analyzed in tap water, soil, soil gas and air samples during Phase I and Phase II of the Naples Public Health Evaluation. The chemicals/microorganisms tested varied depending on whether a sample was from tap water, soil, soil gas or air. The complete list of chemicals and microorganisms is provided below.
