

# **What is a Consumer Confidence Report (CCR)**

## **What is a CCR?**

The Consumer Confidence Report, or CCR, is an annual water quality report that a community water system is required to provide to its customers. The CCR helps people make informed choices about the water they drink. They let people know what contaminants if any, are in their drinking water, and how these contaminants may affect their health. CCRs also give the system a chance to tell customers what it takes to deliver safe drinking water.

## **Why do I get a CCR?**

Every community water system (CWS) is required by US law to provide its customers with a water quality report also known as a Consumer Confidence Report (CCR) by July 1 (one) of each year. This report lists the regulated contaminants the CWS detected in treated water and the level at which they were found for the preceding calendar year.

## **Does the annual water quality report indicate there is something wrong with the water, or that it's unsafe?**

The CCR is a general overall overview of the water quality delivered by your community water system. This report lists the regulated contaminants the CWS detected in the treated water and the level at which they were found for the preceding calendar year. Also, the CCR will post a statement by the NASSIG Preventive Medicine Health Officer if the water is Potable and safe to drink.
