

## Mosquitos Control Notification

NBVC Point Mugu will be controlling mosquitoes this year using a variety of methods that includes the use of larvicides in water bodies and spraying around buildings. Specifically, the treatments will include:

1. Controlling larvae before they emerge as mosquitoes: Briquettes or pellets containing *Bacillus thuringiensis israeliensis (Bti)* or Methoprene dropped in water bodies with mosquito larvae (wigglers).
2. Spraying for adult mosquitoes: only when night time adult mosquitoes reach moderate or high numbers will spraying with resmethrin be used around buildings.

For additional information please call Richard Berumen at 805-989-9425 or Valerie Vartanian at 805-989-4740.
