From: Commanding Officer, Naval Support Activity Mid-South

Subj: NAVAL SUPPORT ACTIVITY MID-SOUTH ENVIRONMENTAL POLICY
STATEMENT

1. Naval Support Activity Mid-South advocates a clean and safe environment. My policy is to minimize the generation of hazardous and non-hazardous solid wastes, and insofar as possible, to eliminate air and water pollutants.

2. As an advocate of the Navy's Pollution Prevention goals, Naval Support Activity Mid-South has developed its own Pollution Prevention Plan and supports its full implementation. The pollution prevention program is constantly changing as new regulations, new techniques, new material substitutions and better waste handling procedures are developed. The foundations of the pollution prevention efforts are environmental compliance, source reduction, waste minimization, promoting responsible citizenship and encouraging feedback.

3. I want all of my employees to be fully aware of all hazardous and potentially dangerous chemicals or equipment used in the workplace and to use them in a completely safe manner. I am committed to operate in full compliance with all applicable federal and state environmental regulations and to continually improve environmental practices and performance by setting and reviewing environmental objectives and targets in our Environmental Management System. I seek the help of all in the achievement of these objectives.

4. Mr. James Heide, my Environmental Installation Program Manager, has overall activity responsibility for establishing the training programs and operating procedures required to implement Naval Support Activity Mid-South's waste reduction written policy statement. As Commanding Officer, I want to show the base's corporate citizenship and environmental stewardship by achieving full environmental compliance at the lowest life cycle cost.

D. A. MCCOWEN
